PERSONAL STATEMENT

MBA-qualified data analyst with a decade of professional experience in pharmacy and real estate — two domains where data accuracy, regulatory compliance, and market interpretation are daily practice. Built an independent portfolio demonstrating end-to-end analytical skills across SQL, Python, Power BI, and Tableau, with projects spanning pharmaceutical market analysis and the Bulgarian real estate market. Looking to bring both technical capability and real business domain knowledge to a data or BI analyst role.

SKILLS

- SQL Server, T-SQL (SSMS) | PostgreSQL
- Python (Pandas, NumPy, Matplotlib, Seaborn, psycpg2, pyODBC, requests, BeautifulSoup4, openpyxl, logging)
- Power BI (DAX, Power Query, Data Modelling)
- Tableau
- Git, GitHub | VS Code | Draw.io
- Kaggle (dataset publishing)

PROJECTS

Bulgaria Real Estate — End-to-End Data Pipeline | Python, Power BI, DAX, Power Query |

Apr–May 2026

Built a four-stage independent pipeline on 199,496 imot.bg listings across 54 Bulgarian regions — from raw web scraping to an interactive Power BI dashboard.

- **Scraper:** Built a modular Python scraper using requests and BeautifulSoup4 with binary price-range splitting to overcome a 1,000-listing URL cap, and full resume support via progress.json checkpointing across an 84-hour multi-session run.
- **Cleaning:** Engineered an 8-stage pipeline parsing Bulgarian price strings, translating property fields, deduplicating records, and flagging outliers — producing Kaggle-published analysis-ready CSV datasets.
- **Analysis:** Quantified regional price premiums and feature uplift using IQR-based outlier exclusion — identifying a Sofia median 1.8x the national average and a +44% price uplift for garage.
- **Dashboard:** Built a five-page Power BI dashboard with DAX measures for median price, price per m², and feature uplift across sale and rental segments — organized into a dedicated measures table following Power BI best practices — delivering insight into where and what to buy or rent across the Bulgarian property market, published for public access.

PharmaMarket — End-to-End Data Pipeline | SQL Server, T-SQL, PostgreSQL, Tableau |

Feb–Mar 2026

Built a four-stage independent pipeline on 21,708 medicines across 240 manufacturers — from ETL schema design to an interactive Tableau dashboard.

- **ETL:** Designed a 9-table relational schema in SQL Server and built a full T-SQL ETL pipeline extracting structured pricing and package data from raw multi-format strings using CTEs and window functions.
- **Cleaning:** Resolved 1,177 comma-parsing artifacts, 30+ encoding errors, and duplicate records using NCHAR, UNICODE, and PATINDEX functions across all 9 database tables.
- **EDA:** Conducted structured analysis across 10 modular PostgreSQL scripts using CTEs and window functions covering magnitude, ranking, part-to-whole, and segmentation analyses.
- **Dashboard:** Built an interactive Tableau dashboard with KPI strips, treemaps, box plots, and LOD expressions visualizing market structure, pricing patterns, and generic competition across 113 dosage forms.

WORK EXPERIENCE

Independent Data Analyst — Self-Directed Portfolio — Remote

Feb 2026 – Present

- Built end-to-end data pipelines across SQL, Python, Power BI, and Tableau, delivering analytical projects in the pharmaceutical and Bulgarian real estate markets.
- Scraped, cleaned, and analyzed 199,496 real estate listings and 21,708 pharmaceutical records, producing publication-ready dashboards and structured EDA findings.
- Published datasets on Kaggle and interactive dashboards on Tableau Public and Power BI, demonstrating full pipeline ownership from raw data to business insight.
- Documented analytical findings in structured reports and narrative summaries, translating technical results into clear business insights accessible to non-technical audiences

Pharmacy Professional — Various Employers — Bulgaria

Aug 2014 – May 2025 (with breaks)

- Maintained accurate dispensing records and monitored inventory levels across multiple branches, developing data discipline and attention to detail directly applicable to analytics work.
- Advised 50+ patients daily on medications, dosage forms, drug classifications, and interactions — building deep domain knowledge now applied directly to pharmaceutical data projects.
- Tracked stock levels, flagged supply inconsistencies, and reported inventory data to management, building hands-on experience with data accuracy and record-keeping.

Real Estate Agent — Various Agencies — Varna, Bulgaria

Dec 2019 – Jul 2023

- Managed end-to-end client relationships across buying, selling, and rental transactions — advising clients based on market data analysis and maintaining clear, trust-based communication throughout the full transaction lifecycle
- Analyzed local market trends and property pricing data to advise clients on buying, selling, and rental decisions.
- Tracked and reported sales performance metrics to agency management on a regular basis.

EDUCATION

MBA — Varna University of Management / Cardiff Metropolitan University — Varna, Bulgaria

Oct 2020

Modules: Strategic Management, People & Organizations, Marketing, Accounting for Decision Makers, Management of Finance, Operations Management

Professional Bachelor in Assistant-Pharmacist — Medical University — Varna, Bulgaria

Nov 2014
